

Are you looking for a new challenge?

The development of a new laboratory management system is the start of a worldwide distribution of this user-friendly software application.

For this innovative project we are now looking for a:

Software Developer

Would you like to work in a young dynamic and innovative organization, where you can explore your options and opportunities?

Then you may be the right candidate for us.

Job Function

Within the Life Science market where GC biotech operates, customers use automation in the laboratory on a large scale.

With use of this automation the role of software applications increases in a way that keywords like Scientific Data Management, data integrity and user-friendliness can no longer be ignored.

We are therefore constantly developing new applications to meet customer requirements.

The latest system to be developed is a laboratory management system, a sort of laboratory ERP system.

As software developer you can be at the start of this innovative laboratory management system project.

Your role is joined responsibility of building the system foundations.

This includes setting up diagrams and architecture, implementations of SOAs, information security, team building and support, etc.

The system will be developed with use of C# development language. In short, a versatile function with many possibilities!

Who Are We?

GC biotech is a young, innovative and professional supplier of automation solutions for life science research, our vision is to transform life sciences into technology. Professionals in the field of sales, applications and software development who are looking for an inspiring job, are welcome at GC biotech.

The company has an informal working atmosphere and our people are very creative, able to operate independently, carry responsibility and contribute to the growth of our company. We are pleased to offer competitive salary packages to successful candidates.
